

Rahul Nath

I am currently a Stipendiary Lecturer in Economics at [Exeter College](#), University of Oxford.

I completed my DPhil (PhD) in Economics at the University of Oxford under the supervision of [Prof. David Vines](#). My dissertation was titled “Asset Pricing in Dynamic Macroeconomics” and it explored the asset pricing implications of central banking rules in a simple New Keynesian model with nominal rigidities in prices and wages. I also hold an MPhil in Economics from the University of Oxford.

My undergraduate studies were completed at the University of New South Wales in Sydney, Australia. I hold a Bachelor of Commerce (Actuarial Studies and Finance) and a Bachelor of Economics (Economics) with First Class Honours and the University Medal in Economics.

I am interested in various topics in macroeconomics and development economics. My primary research interest at present concerns the asset pricing implication of macroeconomic policy, in particular the theoretical link between policy and financial markets and how we can understand this transmission mechanism. I am also interested in macroeconomic dynamics and transmission mechanisms in a development economics context.
